

Quantum simulations of water and simple aqueous solutions

Giulia Galli

Lawrence Livermore National Laboratory, CA, USA

<http://www-phys.llnl.gov/Research/qsg/>

In my talk I will present the results of *ab-initio* simulations of water and simple aqueous solutions (containing small hydrophobic and hydrophilic solutes) and I will discuss comparisons with recent measurements. In addition I will give a perspective on strengths and weaknesses of quantum simulations of hydrogen bonded systems, and on open computational challenges.
